

TRIADICFRAMEWORKS RTT -- OUTER DISC

CUT ALONG DASHED LINE

TRIADICFRAMEWORKS RTT -- INNER DISC (ROTATE)

CUT ALONG DASHED LINE / PLACE ON OUTER DISC / PIN CENTER

TRIADICFRAMEWORKS RTT DECODER WHEEL

Assembly & Usage Guide

MATERIALS NEEDED

- Scissors or craft knife
- Brass brad (paper fastener) or thumbtack + eraser
- Cardstock paper recommended (or glue to cardboard)
- Optional: laminate for durability

ASSEMBLY

1. PRINT

Print Page 1 (Outer Disc) and Page 2 (Inner Disc) on cardstock at 100% scale. Do not scale to fit.

2. CUT

Cut out both discs along the dashed lines.
Use sharp scissors or a craft knife for clean edges.

3. STACK

Place the Inner Disc on top of the Outer Disc, aligning center holes. The gold pointer on the inner disc should point to the outer alphabet ring.

4. PIN

Push a brass brad through both center holes.
Splay legs on the back to secure. The inner disc should spin freely.

HOW TO USE

CIPHER MODE

Rotate inner disc to set your key alignment.
Read outer letter, find the paired inner letter beneath it. Encode/decode any message.

INVERSION MODE

The middle ring shows RTT inversion pairs:
AND>NAW, REW>DER, WIL>LOS, SON>WIN,
FOUND>LOST, SUB>SUP, STRATES>SPHERES.
Practice splitting any word and flipping morphemes.

TRIADICATE

Pick any concept. Split it into morphemes.
Rotate the wheel to find inversions.
Let the new roots find their own meaning.
That is the method: INVERT > RESOLVE > REVEAL.

THE METHOD

INVERT / RESOLVE / REVEAL

"Split the word. Flip the morpheme. Let the new root find its meaning."
