

NASA HPOSS — T-Minus-10 Submission Workspace

This directory contains the working materials for preparing a NASA High Priority Open-Source Science (HPOSS) proposal for the TriadicFrameworks Research Initiative.

The goal of this workspace is to assemble a complete, ROSES-aligned submission package that presents TriadicFrameworks as an open-science infrastructure project capable of advancing NASA's scientific mission through open protocols, substrate-aware frameworks, and community-accessible tools.

Contents

1. Cover Letter

Located in `cover_letter/cover_letter_draft.md`.

This one-page letter introduces the proposal, identifies the submitting organization, references the relevant ROSES solicitation, and provides a concise statement of intent.

2. Scientific/Technical Proposal (15 pages max)

Located in `proposal/`.

These files collectively form the main body of the HPOSS submission:

- `01_project_summary.md`
- `02_scientific_technical_plan.md`
- `03_open_science_plan.md`
- `04_management_plan.md`
- `05_risk_mitigation.md`
- `06_deliverables_and_milestones.md`
- `07_budget_justification.md`

These sections describe the TriadicFrameworks canon, including the Dimensional Substrate Regime Scanning Protocol (dsrsp/0.1), the Resonance Substrate Model (RSM), the Validation-Space-Time engine (vST), and the Structural Life-Regime Profiles (SLRP). The proposal outlines how these open-source components form a coherent substrate for regime-aware scientific analysis and sensor interpretation.

3. Attachments

Located in `attachments/`.

Includes biosketches, facilities descriptions, and other required ROSES supplementary materials.

4. References

Located in `references/`.

Includes the full DOI list for TriadicFrameworks publications and relevant NASA HPOSS documentation links.

5. Templates and Checklists

Located in `templates/`.

Provides formatting notes, ROSES compliance checklists, and submission reminders.

Purpose

This workspace is designed to support a “T-minus-10 days” sprint to assemble a complete HPOSS submission. It provides structure, clarity, and a clean separation of concerns so that each component can be drafted, reviewed, and finalized independently.

Status

Draft — actively under development.
